

HOW TO INSTALL LIGHTROOM PRESETS ON COMPUTERS

PRESETPLUS

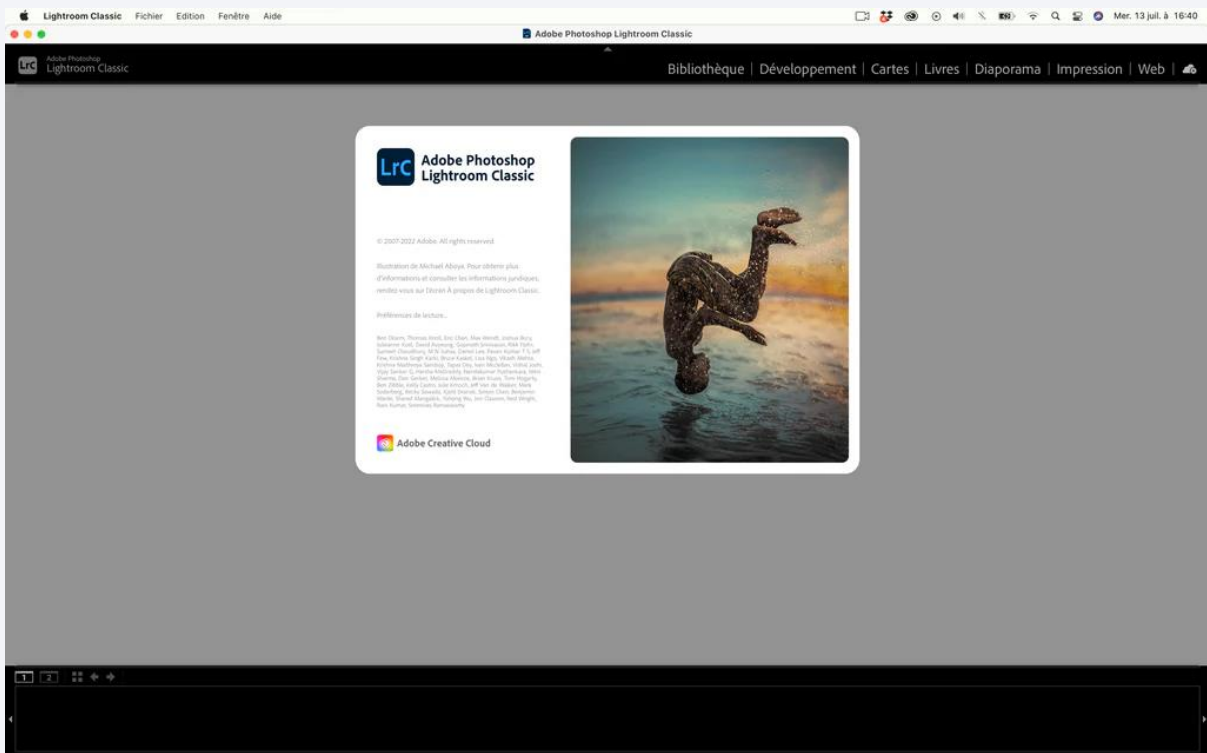

Computer Installation Guide for Lightroom Presets

NOTE: Based on your lighting conditions, camera settings and personal style, these presets will work differently on every photo. The final touch may be done by you through small adjustments like changing the exposure to create your perfect image. Don't hesitate to reach out if you need help tailoring these presets to your specific photo.

STEP 1. GET THE SOFTWARE ON YOUR COMPUTER.

Download Lightroom Classic from your creative cloud and open it.

STEP 2. MAKE SURE YOU HAVE AN IMAGE IMPORTED

To make sure you can install presets you need to have at least one image imported in Lightroom, if you need to import go in the Library section and follow the importation steps.

STEP 3. IMPORT YOUR PRESETS

- Go in the Develop section in your top menu
- In the left column choose to open the "+" button
- Choose Import presets from the dropdown
- Select the ZIP file containing your presets for desktop
- UNZIP the contents into the folder
- Click on Import and you will now find your presets in the list in the left column
